**Subject:** Temp Controller Security Review and Remediation

Hello, can you team please conduct a thorough security audit of our temperature controller interface, including the source code that it uses? There may be nothing wrong with it, but if you do find something, please correct it if you can, or at the very least, report back with what issues you found so I can take them to our vendor (who is awful and probably won't fix it today, but it's worth a shot).

You should be able to get through that entire system in 2 hours, considering you aren't doing much else. If you find something wrong, please let me know, and also let me know if you managed to fix it.

Thank you.
